DECLARATION

The undersigned, Dana Scruggs, having an office at 7970 Sunset Cove Drive, Indianapolis, Indiana 46236, hereby states that she is well acquainted with both the English and German languages and that the attached is a true translation to the best of her knowledge and ability of US PATENT APPLICATION, INV.: HERZBACH, L., ET AL.

The undersigned further declares that the above statement is true; and further, that this statement was made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or document or any patent resulting therefrom.

No patent-barring, interfering related art was identified. Taking general technical knowledge into account as well, it is to be acknowledged that the subject matter of the claims does not obviously result from the related art. One can therefore hold out for the prospect of granting according to § 49 Patent Law.

Claims 1 through 4 can not be granted in the current form, however.

A method claim should describe the sequential steps of the method. Information directed to the expert is subject matter of the description. Abbreviations can be used in the description, but not in the claims.

The examining office therefore considers the claims provided in the attachment to be grantable.

The applicant is requested to approve these claims and resubmit them.

Additionally, the description is faulty.

The related art should be described in the introduction to the description. The appropriate literature cites are to be mentioned here. It is therefore requested that the publication by B. Hofer, Technische Rundschau, 52/1984, and /1/ and /2/ be included in the description of the related art.

/1/ makes known a method for producing casting moulds, in which the form is produced from an easily meltable mixture of salt containing water of crystallization and salt that is readily soluble in water in heat.

/2/ makes known a method for producing a form tool, in which the use of high-temperature isostatic pressing is recommended, among other things, to press the powder.

Diagrams that describe the related art should be labelled as such. The label "Related Art" should therefore be added to Drawing 3.

The applicant is therefore requested to revise the application documents without impermissible additions and to resubmit them.

Granting is not yet possible based on the present documents.

If there is no intention of expressing comments regarding the subject matter of this decision, please provide informal notification that the decision was received.
